

INTEGRATIONS AND LICENSING

At SAAS, we believe that technology only delivers its true value when it works in an integrated manner and in full compliance with the appropriate licensing models. For this reason, we have developed a comprehensive approach that covers consulting, supply, implementation and ongoing management of software and hardware solutions, ensuring that our clients always have access to the best tools in a secure, legal and scalable way.

WHAT WE OFFER

MULTIPLATFORM INTEGRATIONS

We connect critical systems, enterprise applications (SAP, PRIMAVERA, CEGID, PHC, O365, Salesforce, ERPs, CRMs, among others) and hybrid or cloud infrastructures to ensure efficient information flows and seamless communication across all technological environments.

FLEXIBLE AND COMPLIANT LICENSING

We support organizations in acquiring and managing official licenses from global vendors such as Microsoft, Adobe, Cisco, Kaspersky, Fortinet, Zoom, Dell and HPE, among others. We offer licensing models tailored to the size and needs of each organization, including perpetual licenses, monthly or annual subscriptions, volume licensing and special programs for specific sectors.

LICENSE LIFECYCLE AND COMPLIANCE MANAGEMENT

We monitor and manage the entire license lifecycle, reducing audit risks, ensuring regular updates and optimizing licensing costs.

PROPRIETARY SAAS SOLUTIONS

In addition to representing major manufacturers, we also provide our own solutions such as SAAS One365 (Billing and POS), SAAS Databox (Backup and Disaster Recovery) and SAAS Connect (MPLS, SD WAN and VPN).

KEY BENEFITS

- o Cost reduction through optimized licensing models
- o Legal and technological security by using only genuine software
- o Full system integration
- o Local technical support
